## GANTT charts?

I noticed in the "teacher notes" section of the guide that we must know how to construct Gantt charts. I also saw a question asking to create one in the May 2015 paper. I had not heard of this before, and was wondering if there were other charts/visualisations we had to be aware of for either paper.

I've never seen a GANTT chart question, but I trust you. Please take a look at this example of a [gantt chart](#). . Please look at another [gantt chart here](#). Basically, you break down the different tasks you need to complete and list them on the left side of your spreadsheet. Each task is called a WBS, work-breakdown-structure. Then on the right side, you indicate the amount of time a task might take. Tasks can happen at the same time (in parallel) or they can depend on each other (I can't do task two until I do task 1). Often, concurrency questions include GANTT chart questions
